

Get API Credentials in PayPal

1. After login, and from the “Home” dashboard page, select App Center in the Quick Links section at top or from the menu.

2. On the App Center page, type “API” in the search and select API Credentials in the search results.

3. After clicking on API Credentials from above, on the next page, click on the “Get Started” button.

Search tools

API credentials

Get your API credentials so you can accept PayPal payments on your site.

Get Started

4. Clicking on the "Get Started" button will bring up a popup window that will give you your Client ID and Secret Key. Those are needed to connect to your store. Both are needed. Use the copy button (square icon on the right) to copy and then paste those to send to the developer.

Get your API credentials

API credentials allow your ecommerce platform and PayPal to exchange information. Copy your client ID and secret (API credentials) and use them in your ecommerce platform to connect your accounts. Not sure how? Follow your platform's integration instructions.
